

AGUS SAPUTRA

Bengkalis, Riau | +6281276370587 | agusptra44@gmail.com | linkedin.com/in/agusptraa

PROFILE

Highly motivated Final-year Software Engineering student with proven expertise in Mobile Development (Flutter) and Backend Engineering (Laravel/Spring Boot). Experienced in developing scalable applications for logistics and environmental sectors, including projects utilizing Generative AI integration, Location-Based Services (LBS), and secure reporting platforms. Strong understanding of SDLC, Agile Methodologies, and Object-Oriented Programming (OOP) principles, complemented by hands-on industry internship experience and leadership as a Google Student Ambassador. Seeking a professional software engineering role to leverage technical skills, adaptability, and problem-solving capabilities.

EDUCATION

Politeknik Negeri Bengkalis 2022 – 2026 (Expected)

Bachelor of Applied Science (B.ASc), Software Engineering

- Core Competencies: Strong understanding of the full Software Development Life Cycle (SDLC), Agile Methodologies, Data Structures, Data Mining, Artificial Intelligence (AI), and Object-Oriented Programming (OOP) principles.
- Relevant Coursework: Software Engineering, Mobile & Web Programming, Database Management Systems, Software Testing & QA, Software Analysis & Design, Artificial Intelligence.
- GPA: 3.75 / 4.00

Universitas Airlangga 2024

Exchange Student, Informatics Engineering (Pertukaran Mahasiswa Merdeka)

- Focus: Practical experience in building Multiplatform & Web Applications and studying IT Project Management methodologies.

EXPERIENCE

Mobile Developer Intern Mar 2026 – Jul 2026

Assist.id · Internship · Pekanbaru, Riau, Indonesia (On-site)

- Architected and developed a comprehensive HR & Attendance mobile application from scratch using Flutter and Clean Architecture, ensuring highly maintainable code across Data, Domain, and Presentation layers.
- Independently implemented security hardening features, including jailbreak detection, and designed graceful error handling (e.g., swallowing 403 Forbidden errors) to prevent UI crashes and ensure a seamless user experience.
- Optimized API search functionality by implementing a 500ms debounce with RxDart to minimize server load, and elevated the UI with smooth animations (AnimatedSize) and skeleton loaders (Skeletonizer) for dynamic state handling.
- Developed robust, enterprise-grade modules including a multi-role Room Booking system, a dynamic Daily Report module using BLoC, and an advanced Excel (.xlsx) data export feature with custom styling and conditional formatting.
- Refactored Node.js API payloads for strict null safety and integrated localization (English & Indonesian), ensuring the application is accessible and ready for a diverse user base.
- Tech stack: Flutter, Express.js, Node.js.

Google Student Ambassador Aug 2025 – Present

Google

- Organized and led "Gemini AI Socialization" events, demonstrating practical use cases of Generative AI for academic productivity and fostering early adoption of Google AI tools.
- Designed and executed creative campaigns (social media content & video scripts) to promote Google developer tools, significantly increasing student engagement across platforms.
- Selected as a campus leader to bridge the gap between Google technologies and university students.

Staff of Human Resources & Development (Kaderisasi Division) Feb 2024 – Jan 2025

Informatics Engineering Student Association (HMTI)

- Coordinated the annual student orientation and onboarding program for over 200+ new students, ensuring successful cultural adaptation.
- Collaborated with the core committee to assess member performance and execute regeneration strategies for the organization's sustainability.

KEY PROJECTS

Rekaloka | Mobile Developer & Project Manager Nov 2025 – Present

- Developed a gamified cultural heritage exploration app using Flutter, integrating Location-Based Services (LBS) to display cultural content based on user proximity.
- Engineered an AI-powered feature (Generative AI integration) that reconstructs 2D user prompts into 3D cultural object models via a chat interface.
- Implemented a mission validation system using geolocation and camera access to verify user visits to cultural sites (e.g., temples) with distance calculation logic.

Siap PA | Full Stack Mobile Developer May 2025 – Jun 2025

- Built a secure reporting platform for violence against women and children using Flutter (Mobile) and Laravel (Backend).
- Developed a multimedia evidence reporting system allowing users to upload photos and videos securely via API.
- Implemented real-time status tracking for reports and a monitoring dashboard for authorities to manage cases efficiently.

My Presensi | Android Developer Feb 2025 – Apr 2025

- Designed a secure mobile attendance system utilizing Location-Based Services (LBS) for precise employee tracking.
- Engineered a Fake GPS Detection algorithm to prevent location spoofing and ensure data integrity during check-ins.
- Optimized application performance for various Android devices to ensure reliability in low-bandwidth environments.

GreenPoint | Mobile Developer Nov 2024 – Jan 2025

- Created a digital waste bank application using Flutter and Laravel to incentivize recycling habits through a reward point system.
- Integrated QR Code scanning functionality for seamless transaction recording and Google Maps API for locating the nearest waste banks.
- Implemented Google Sign-In authentication and real-time push notifications to enhance user engagement.

CERTIFICATIONS & ACHIEVEMENTS

Certifications & Licenses

- Certified Junior Mobile Programmer – BNSP (National Professional Certification Board).
- Certificate of the Merdeka student exchange program batch 4 by Kampus Merdeka.
- Flutter Developer Expert – Dicoding Indonesia (Completed Learning Path: Beginner to Expert).
- SOLID Programming Principles – Dicoding Indonesia.
- Back-End Application Development – Dicoding Indonesia.
- Cloud Practitioner Essentials (AWS) – Dicoding Indonesia.

Achievements

- 2nd Best Winner, ICIF (Informatic Creativity Innovation Festival) 2025 – Politeknik Negeri Bengkalis.
- Favorite Junior Developer, ICIF (Informatic Creativity Innovation Festival) 2024 – Politeknik Negeri Bengkalis.

TECHNICAL SKILLS

- Programming Languages: Dart, PHP, Java, JavaScript, Python
- Frameworks: Flutter, Laravel, Spring Boot, FastAPI, Express.js
- Tools & Cloud: Git, Firebase, REST API, AWS (Essentials), Postman, Google Maps API, Power BI
- Methodologies: Agile (Scrum), OOP, SOLID Principles, Clean Architecture, SDLC

PERSONAL SKILLS

- Public Speaking
- Fast Learner
- Adaptability
